1.0 Introduction and Project Summary

0

0

0

0

0

000

FAA contract DTFA04-99-P-20129, Brush Cutting/Clearing on Annette Island, Alaska, was awarded to Metlakatla Indian Community (MIC) on September 7, 1999. Clearing work began September 20, 1999 and was completed December 17, 1999. MIC's subcontractor for this project was Metlakatla Power and Light, an entity of the MIC.

Annette Island is located in southeast Alaska, approximately 15 miles south of Ketchikan. Metlakatla, population approximately 1600, is situated at the northern tip of the Metlakatla Peninsula, the only inhabited area of the island. The United States and Canadian governments, along with private companies, leased much of the Metlakatla Peninsula from World War II until the mid-1970s. These entities left abundant evidence of their presence on the island, to include many buildings, miscellaneous equipment, abandoned drums and other materials. Since its abandonment in the 1940s to 1970s, the area has become overgrown with vegetation. This contract was initiated to reclaim the facility sites from the temperate rainforest. After clearing, the sites will be cleared of the above-mentioned structural remains, abandoned equipment, debris, etc. left behind and subsequently revealed through this contract.

The photos on the following page show a pictoral narrative of the project; once trees were felled (see Photo 1), the material was manually hauled (see Photo 3) or slung with a boom truck (Photo 4) to the chipper. One person typically ran the chipper (see Photo 5). At the beginning of the project, wood chips were directed into pickup truck beds for hauling to the Metlakatla Landfill. After only two trips to the landfill using that method, the subcontractor determined it would be a better use of time and resources to stockpile the chips on site for later removal using a backhoe and dump truck (see Photo 6 below).

The site preparation contract as sent to MIC required the contractor to remove trees and brush at the sites identified below, as well as to remove building remains, drums, abandoned equipment, and general site debris. MIC split the contract into two phases: brush clearing and materials removal, such as building remains, drums, abandoned equipment, and drums.

The contract required trees and brush to be felled no more than four inches above ground surface. Smaller material was chipped and hauled off site and, as specified in MIC's Clearing, Revegetation, and Reseeding Plan, larger logs were limbed and cut into approximately 6-feet lengths and were left stacked on site stacked along the nearest roadway for local residents to retrieve for personal use. Most chips were hauled to two residences very near most of the project clearing work, where the owners had requested the chipped material for landscaping. Woody debris from sites farther away from the above-mentioned residences was hauled to the Metlakatla Landfill for disposal and subsequent burning. A total area of approximately 369,400 square feet (SF) (8½ acres) was cleared in the process of executing this contract, generating approximately 285 cubic yards (CY) of woody debris.

1. Trees were felled using chain saws.

platforms along Army Beach.

3. Felled material was usually packed out manually.

4. Some material was piled and slung to the chipper using a boom truck.

5. Felled material was fed into the chipper.

6. Chipped material was stockpiled on site and then loaded into a dump truck for hauling.

A. Lessons Learned

Communication proved to be an area in need of improvement. For example, contract work was scheduled to begin September 13, 1999, but actually began September 20, 1999. The Metlakatla Indian Community's Contracts and Grants department and the FAA were expecting and prepared to begin work on September 13. Apparently, the subcontractor failed to notify MIC their start date had changed, leaving the FAA contracting officer's technical representative (COTR) on site one week early. This communication difficulty proved to be indicative of what lay ahead. As revealed in the daily field reports, MIC's subcontractor commonly failed to arrive on site in a timely fashion, without notifying the COTR of the change in plans.

B. Project Difficulties

Project difficulties were encountered due to relentless inclement weather during nearly the entire tree and brush removal contract. Record rainy and windy weather hampered productivity and even created personnel safety hazards. Additional complexities arose from personnel issues; MIC's subcontractor had difficulty keeping the brush-clearing positions filled.

MIC's decision to split the contract into two phases meant that debris had to be moved and maneuvered around throughout the tree and brush clearing process, whereas if MIC had pursued one subcontractor for the entire project as it was written, the removal and cutting work would have occurred simultaneously.

2.0 Site-by-Site Description of Accomplishments

A. Tank Farm, Site 42

Clearing work began on the tank farm site on September 20, 1999, and continued through October 7, 1999. The scope of work included vegetation clearing inside the fenced area and a 10-12 ft swath around the outer perimeter of the fence. Approximately 27 CY of woody debris were hauled from this approximately 80,000 SF site. Seven of these cubic yards of chipped material were hauled to the Metlakatla landfill and burned, and the other 20 yards were hauled to two nearby residences whose owners had requested the material for landscaping. Several stacks of wood cut in approximately 6-feet lengths were left on site for residents to collect for personal use. See photos 1-10 below, showing brush clearing activities at the tank farm area.

Once clearing work removed the trees near the pump house near the fuel dispensing island, the shoddy structure was extremely susceptible to wind damage, and deteriorated rapidly throughout the project. At the time of this report, the structure has only one wall, partially intact. Clearing work at the tank farm area uncovered previously unnoticed dumped material just beyond the tank farm back fence. These materials consisted of spent fuel and paint containers and fuel filters.

 Interior of tank farm where previous 8 tanks were located, after clearing.

9. Tank farm interior prior to clearing.

10. Tank farm interior after clearing.

B. Army Beach

Clearing activities at the Army Beach tank platform sites included clearing a pathway from the beach up to each tank platform as well as clearing the platforms themselves and a pathway around each. Work began on these sites October 5th and was completed the following day, October 6, 1999.

Due to the isolated nature of and extremely limited access to these sites, the woody debris cleared at these sites was removed from the platforms and pathways and left in the forest in the surrounding area. Approximately 3600 SF were cleared at the combined locations of the tank platforms along Army Beach. No dump areas or other issues of environmental concern were noted during the clearing process at this site. See photos 1-4 below, which show clearing activities at this site.

1. Tank Platform 3 prior to clearing work.

2. Tank Platform 3 after clearing work.

3. Tank Platform 4 prior to clearing work.

4. Tank Platform 4 after clearing work.

C. Gear Shed Building 217

The scope of work executed at the Gear Shed Building (also known as Bldg 217) included clearing brush in a 10-12 ft pathway from the main dock road to and around the former building, as well as inside the former building's perimeter. Clearing activity on this site began September 28th and, although it was mostly complete on October 1, the site was 100% complete on November 2nd, 1999. Approximately 2000 SF of clearing at this site yielded approximately 5 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked and left on site for residents to collect for personal use. See photos 1-3 below, showing clearing activities at this site.

1. Building 217 area prior to clearing work.

2. Building 217 area after clearing work.

3. Building 217 after clearing.

D. 7000 Gallon AST near Bldg 217

The 7,000 gal aboveground storage tank (AST) described herein sits just off the east side of Butterfly Avenue, close to the corner of Butterfly Avenue and Main Dock Road. Tree and brush clearing activities at this site included clearing a 10-12 ft pathway from Butterfly Avenue to and around the tank. Clearing activity on this site began September 28th and, although it was mostly complete on October 1, the site was 100% complete on November 2nd, 1999. Approximately 2000 SF of clearing at this site yielded about 5 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked and left on site near the roadway for residents to collect for personal use. See the photo below, which shows this site after clearing work. Prior to clearing activities, the tank was completely concealed from view across the roadway where this photo was taken.

1. 7000 AST after clearing work.

F. Old Power Plant

Tree and brush clearing activities at the old power plant included clearing a 10-12 ft pathway around the concrete tank saddles just south of the building and along the pipeline to the building, as well as a 10-12 ft pathway around the building. Work began on this site November 6th and continued intermittently until the site was finalized December 2nd, 1999. Approximately 5000 SF of clearing at this site yielded about 10 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked and left on site for residents to collect for personal use. See photos 1-4 below, showing clearing activities at this site.

Although building materials and general debris were scattered around the old power house, no previously unknown hazardous substances were noted during or after the brush clearing efforts at this site.

1. Old Power Plant prior to clearing work.

2. Old Power Plant after clearing.

Pipeline route from tank saddles to power plant building prior to clearing.

 Pipeline route from tank saddles to power plant building after clearing.

G. Equipment Wharehouse Building 100

The Equipment Warehouse (Building 100) is located on the west side of Butterfly Avenue, approximately half-way from the corner of Main Dock Road to the gas station. Contracted tree and brush cutting activities at this site included clearing the area within the former building's footprint as well as a 10-12 ft perimeter pathway. Work on this site occurred the week of November 22-26, 1999. Approximately 6000 SF of clearing at this site yielded about 8 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked alongside Butterfly Avenue for residents to collect for personal use. Photos 1-4 (below) show clearing activities at this site.

Although the site is literally covered with decaying building materials, no materials or substances of obvious environmental concern were discovered during the brush clearing operation.

 Heavy Equipment Warehouse Building 100 prior to clearing work.

 Heavy Equipment Warehouse Building 100 after clearing work.

Entrance to Bldg 100 from across Butterfly Ave prior to clearing.

 Entrance to Bldg 100 from across Butterfly Ave after clearing.

H. Auto Repair Shop Building 219

The Auto Repair Shop (Building 219) is also located on the west side of Butterfly Avenue, across the street from the gas station. Clearing work at this site included the area within the former building's footprint as well as a 10-12 ft pathway around the perimeter, to the outer FAA Storage Yard boundary on the north side. Work on this sub-parcel within the FAA Storage Yard began November 3rd and continued intermittently until it was finished December 2, 1999. Approximately 5000 SF of clearing at this site yielded about 8 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked alongside Butterfly Avenue for residents to collect for personal use. Photos 1-3 below show clearing activities at this site.

All discernable remains of this building have been removed or have decayed; no structure or foundation materials remain to any appreciable degree. The many other items revealed during the brush clearing operations appear to be benign in nature and present no cause for environmental concern.

 FAA Storage Yard in the area of Bldg 219 prior to clearing work.

FAA Storage Yard in the area of Bldg219 after clearing work.

Building 219 area after clearing. Note northern boundary of FAA storage yard.

I. Gas Station

The gas station (Site 49) is, at the date of this report, intact and is located on the east side of Butterfly Avenue, approximately 275 ft north of the intersection of Butterfly and 28th St. Tree and brush cutting at this site included an area north of the building as well as a pathway around the building's perimeter, which approached the slough behind the building to the east. The area north of the gas station was cleared to expose piping in the area which was previously disguised by vegetation. Clearing activities at the gas station began on October 8th, and although most work at this site was completed by October 13, work was finalized December 14, 1999. A cleared area of approximately 10,000 SF at this site (building and drive areas included) yielded about 7 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked alongside Butterfly Avenue for residents to collect for personal use. No issues of environmental concern were brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. Photos 1-4 below show clearing activities at this site.

 North of the gas station prior to clearing work.

North of the gas station after clearing work.

South of the gas station prior to clearing work.

 South of the gas station after clearing work.

J,K,L. Personnel Garage Buildings 201, 203, and 205

Former personnel garage buildings 201, 203, and 205 were located on the east side of Butterfly Avenue, between the intersection of Butterfly and 28th St and the gas station (Site 49). Tree and brush cutting at these sites was combined so the cleared area and efforts associated therewith were contiguous. The cleared area stretched north-south from 28th St to the gas station and east-west from the slough east of the site to Butterfly Avenue. Clearing activities at the personnel garages area began on October 11th, and although most work at this site was completed by November 2, work was finalized December 14, 1999. A cleared area of approximately 40,000 SF at this site (building and drive areas included) yielded about 17 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked alongside Butterfly Avenue and 28th St for residents to collect for personal use.

No issues of environmental concern were brought up whilst clearing this site. However, large amounts of roofing sheet metal, left after the building was burned for fire training, remain at the site and may migrate from or around the site due to the high winds in the newly opened area. Debris material and appliances which had gone unnoticed before were noted in the slough on the eastern site border. See Photos 1-3 below.

 Personnel Garages Area prior to clearing work.

 Personnel Garages Area after clearing. Note small building visible in background.

Personnel garages area after clearing.

M. Fire Truck Hut

0 0

0 0

The Fire Truck Hut (Site 50) is, at the time of this report, still intact and lies on the west side of Butterfly Avenue, approximately 150-200 ft north of the intersection of Butterfly and 28th St. Tree and brush cutting at this site was combined with the clearing associated with the larger FAA Storage Yard. The cleared area for the fire truck hut consists of the perimeter around the building: east to Butterfly Avenue, and approximately 10-12 ft around the north, west and south sides of the building. Clearing activities at the fire truck hut began on October 11th, and although most work at this site was completed by October 13, work was finalized December 14, 1999. A cleared area of approximately 10,000 SF at this site (building and drive areas included) yielded about 7 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked alongside Butterfly Avenue for residents to collect for personal use.

It was noted that once the surrounding trees were removed, the fire truck hut appears significantly more vulnerable to wind damage. No issues of environmental concern were brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. Photos 1 and 2 below show clearing activities at this site.

1. Fire truck hut prior to clearing work.

2. Fire truck hut after clearing work.

N. Garage/Machine Shop Bldg 313

The former Garage and Machine Shop, Building 313 (Site 51) was situated on the northwest corner of the Butterfly Avenue-28th St intersection. Tree and brush cutting at this site was combined with the clearing associated with the larger FAA Storage Yard. The cleared area for the garage/machine shop stretched east to Butterfly Avenue, south to 28th St, and approximately 10-12 ft around the west and north sides of the former building. Clearing activities at this site began on October 21st and were completed on November 2, 1999. A cleared area of approximately 10,000 SF at this site (building and drive areas included) yielded about 8 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked alongside Butterfly Avenue and 28th St for residents to collect for personal use.

No issues of environmental concern were noted or brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. However, large amounts of roofing sheet metal, left after the building was burned for fire training, remain at the site and may migrate from or around the site due to the high winds in the newly opened area. Photos 1-4 below show clearing activities at this site.

Building 313 area of the FAA storage yard along Butterfly Ave prior to clearing.

 Building 313 area of the FAA storage yard along Butterfly Ave after clearing.

P. PAA Garage at Hangar

Today the former Pan-American Airways garage, located south of the hangar, remains only as a rock fireplace. Tree and brush cutting at this site was actually nearer to the former control tower site, immediately below and west of the tower legs to the nearby roadway. The area was cleared in order to access an underground storage tank in the area and also to access any potentially contaminated soil associated with the tank. The cleared area for the PAA garage line item extended approximately 30 ft x 40 ft (1,200 SF). Clearing activities took only one day at this site (November 6, 1999), and the approximately 2 CY of chipped woody debris were removed on December 1, 1999. All felled trees were removed and, along with the chipped material, hauled to the Metlakatla Landfill for disposal.

It was noted by the FAA's COTR that after the MIC subcontractor cut and removed the trees in that area, more trees were cut by an unknown party and left on site. No issues of environmental concern were brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. Photos 1-3 below show clearing activities at this site.

 Control tower base near PAA garage prior to clearing activities.

Control tower base after clearing work.

3. Control tower base after clearing work.

Q. FAA Storage Yard

0 0

The FAA Storage Yard, situated on the northwest corner of the Butterfly Avenue-28th St intersection, occupies approximately 180,000 SF (inclusive of buildings and drive areas). Tree and brush cutting at this site was combined with the clearing associated with three smaller sites within the storage yard area: the auto repair shop building (219), the fire truck hut (building 220), and the garage/machine shop building (313). Other former building carcasses also occupy the storage yard area, but the only standing structure is the fire truck hut. The cleared area for the storage yard is composed of 325 ft north along Butterfly Avenue and 575 ft west along 28th St from the intersection of the above named streets, resulting in approximately 4 acres of cleared area. Clearing activities at this site began on October 21st and were completed on December 17, 1999. This site languished on the "to do" list partly due to its size and partly due to performing work at other sites while this one was in progress. Clearing these four acres at the storage yard area yielded about 170 CY of chipped woody debris, which were hauled from this site to two nearby residences to be used for landscaping. Felled trees were cut into 4-10 feet lengths and subsequently stacked alongside Butterfly Avenue and 28th St for residents to collect for personal use.

No issues of environmental concern were brought up whilst clearing this site, and although many more objects than previously known were revealed, no "surprises" or hazardous materials were discovered. Photos 1-12 below show clearing activities at this site.

R. Downed Towers Near NDB

Near the existing NDB lie the remains of four abandoned towers which were downed and have been partially removed for recycling. Tree and brush cutting at this site was limited to the area around and to the western-most tower base. All cutting work on this site was complete on November 6th and the material was removed (bringing the site to 100% completion) on December 1st, 1999. A cleared area of approximately 700 SF at this site yielded about 2 CY of chipped woody debris, which were hauled from this site to the Metlakatla landfill for disposal.

No issues of environmental concern were brought up whilst clearing the downed tower near the NDB, and no previously unknown objects or "surprises" were discovered. Photos 1-4 below show clearing activities at this site.

00000

000

The area to be cleared near the sand shed/asphalt plant (no longer a standing structure) was to have been in the area of a 25,000 gallon fuel storage tank. The tank was not successfully located and the area cleared is the most probable tank location, as determined by FAA's COTR. This area was surrounded by man-made berms on two sides, a slough on one side, and a backfilled and compacted access roadway on the other. All cutting work on this site was complete on December 6th and the material was removed (bringing the site to 100% completion) on December 7th, 1999. A cleared area of approximately 3300 SF at this site yielded about 3 CY of woody debris, which were hauled from this site to the Metlakatla landfill for disposal.

No issues of environmental concern were noted or brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. Photos 1-4 below show clearing activities at this site.

 Sand shed/asphalt plant area prior to clearing activities.

Sand shed/asphalt plant area after clearing.

Sand shed/asphalt plant area of probable tank location, prior to clearing.

 Sand shed/asphalt plant area of probable tank location, after clearing. Note upright drum visible after clearing.

T. Service Garage Building 314

The service garage Building 314 (Site 55) remains only as a concrete pad and metal door frame on the south side of 28th St just west of the intersection with Butterfly Avenue. Tree and brush cutting at this site included the area over an underground storage tank adjacent to the building area. Clearing activities at the service garage building only encompassed one day's work, November 9, 1999. Felled material to be chipped was hauled across the street to the FAA storage yard and chipped there. A cleared area of approximately 8,000 SF at this site (building and drive areas included) yielded about 3 CY of chipped woody debris, which were hauled from this site to a nearby residence to be used for landscaping. Logs from felled trees were cut into 4-10 feet lengths and subsequently stacked alongside 28th St for residents to collect for personal use.

Clearing activities at this site allowed better evaluation of the many vehicles and other abandoned equipment and materials. As the trees and brush were cleared away, the sheer number of vehicles present behind the site became more evident. Although no specific areas of obvious contamination were noted, the dense vehicle population in back of this site may be a source of contamination. See Photos I and 2 below, showing the site after clearing work.

 Building 314 area after clearing. Note vehicle carcasses in back of site.

Building 314 after clearing work.Former UST location is at right of photo.

V. Localizer

At this time of this report, the localizer facility (Site 80) was partially still standing but was lacking structural integrity. Tree and brush cutting at this site was scant, only requiring removal of two small trees. These two trees were removed and the site work was complete November 6, 1999. The trees were hauled to the Metlakatla Landfill for disposal.

No issues of environmental concern were brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. Photos 1-3 show clearing activities at this site.

 Localizer building prior to clearing project.

2. Localizer building after clearing work.

3. Localizer building after clearing activities.

W. Middle Marker Facility

0 0

The Middle Marker facility (Site 24), at the time of this report, was still an intact structure, but without a door the facility will likely deteriorate rapidly. The Middle Marker is located off Canoe Cove Road. Tree and brush cutting at this site was necessary only to affect a 10-12 ft clearing around the building. Clearing work took only one day (November 6, 1999) to execute. Materials felled at this site were loaded onto trucks and hauled to the Metlakatla landfill for disposal and subsequent burning.

No issues of environmental concern were brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. Photos 1-3 below show clearing activities at this site. Photo 1, the only "before" photo only shows a small portion of the cleared area; the area behind the facility. Photo 3 clearly shows the "after" condition of the cleared area.

1. Middle marker facility prior to clearing.

Middle marker facility after clearing.

Cleared area at middle marker facility, behind building.

X. Glide Slope Facility

0 0

The glide slope facility (Site 36) is located just west of the sand shed/asphalt plant near the northeastern end of Runway A. All contract requirements for cutting and removing trees and brush at this site were completed in one day, November 6, 1999. Approximately 2500 SF were cleared in the process of executing contract requirements at the glide slope facility, resulting in approximately 2 CY of woody debris being hauled to the Metlakatla Landfill for disposal.

No issues of environmental concern were brought up whilst clearing this site, and no hazardous materials were discovered. Photos 1-3 below show clearing activities at this site.

 Glide slope facility prior to clearing, taken from roadway.

Glide slope facility after clearing, taken from roadway.

Glide slope facility prior to clearing, taken from inside glide slope area.

Y. ACS Transmitter

The ACS transmitter facility (Site 23) remains only as a building foundation and miscellaneous building materials strewn about the site. Tree and brush cutting at this site was scant, only requiring removal of an alder bunch growing up through the building foundation and small brushy material in front of the building. The ACS transmitter was one of several sites begun and completed November 6, 1999. The felled material was hauled to the Metlakatla Landfill for disposal.

No issues of environmental concern were brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. Photos 1 and 2 below show clearing activities at this site.

 ACS transmitter site prior to clearing.

0

The remote receiver facility (Site 63) is located off the main road from Metlakatla to the Hangar. The building is a concrete block structure and is substantially intact and structurally sound. Tree and brush cutting at this site was scant, only requiring removal of two small trees. The ACS transmitter was one of several sites begun and completed November 6, 1999. The felled material was hauled to the Metlakatla Landfill for disposal.

No issues of environmental concern were brought up whilst clearing this site, and no previously unknown objects or "surprises" were discovered. Photos 1-4 below show clearing activities at this site.

 Front view of remote receiver station prior to clearing work.

Project:	Brush Clearing	Date:	92099
Site Name	Tank Farm	Site Numb	er: 42
Weather:	Sunny, calm, turned OC, but gen, pleasant day.	OTM:	LDJ
THE RESERVE OF THE PERSON NAMED IN	MP&L: 8:45am	Stop Time	3:30pm
	pleted Today:	و المالسانوا	
Began cutt	ing trees at tank farm. Initial cutting to clear area for	access, then re	eturn and cut to <4" ags. Initially
began hau	ling chips away to the MTM dump, and then determin	ed they were w	vaiting too long for the pickup truc
	e round trip. So we identified a mutually acceptable s	spot on the site	to SP chips and they'll load and
haul them	later.

Site Name	Tank Farm	Site Number:	42
Weather:	Overcast, light rain, calm	OTM:	LDJ
Start Time	9:15am	Stop Time:	3:45pm
Work Com	pleted Today:		·

Worked on cutting in between tanks and around outer perimeter of tank farm. Also still hauling out wood that's already been cut.

Comments:

Crew brought out the chipper in the afternoon, ran chipper from 1pm-3:45pm. Also brought boom truck on site for same hours.

Spoke with Carl Gaube re: schedule. I noted that it will be difficult to adhere to 9-wk projected completion at the current rate of progress. I also told him the debris removal/building remains removal and RI contracts have been delayed until the new year and March, respectively. I also told him that as a result of those contracts being pushed back, the brush clearing contract could proceed through the sites in MP&L's desired order.

Cut and stacked material in the personnel garages area. Brought out chipper for morning only. Chipped small amount of material.

Comments:

Met with Carl Gaube this morning regarding status of project schedule. He mentioned the crew would be thinning due to vacations, etc. We mentioned the crew pace had picked up due partly to better terrain than the tank farm, plus getting a system down for the work. We also discussed that the area actually needing clearing at the gas station was less than called for in the contract which was a good trade for the vaguely worded work required at the tank platforms along Army Beach.

I marked out the area of the FAA Storage Yard which needs to be cleared. The contract calls for 500×500 area. In actuality, the area needing clearing is approximately 575×325 , which is 63,000 SF less than required in the contract. In addition, three sites listed separately in the contract lie within that 575×325 area (Bldg 313, Fire Truck Hut, and Bldg 219).

Weather: Foggy, misty	OTM:	LDJ
Start Time 8:30am	Stop Time:	3:45pm

Began the day by continuing to cut and stack material at the personnel garages area. Also have rubber-tired CASE 580 Super L backhoe out loading a 5 CY dump truck (from LP).

Comments:

The chipper was not used in the morning.

Took two loads of chips to the MTM dump. After that, Lisa Bryant (MP&L Manager's wife) stopped by and requested the chips be hauled to their residence instead. As their residence is only about 800 feet from the work site, the crew and I agreed. Hauling to their residence saves time and gas with the dump truck.

The chip hauling operation is going really fast with the delivery site being so close.

Project: Brush Clearing	Date:	102099
Site Name Personnel Garages (201, 203, 205) Area	Site Number:	49 and vicinity
Weather: Foggy, misty	OTM:	LDJ
Start Time: 10:30am	Stop Time:	4pm

Chipped material that was already cut at the personnel garages area. Also hauling chipped material to Bryant residence with the backhoe (no dump truck). Also cut about 12-15 trees which were still standing in this area. The gas station and personnel garages all are ~80% done. All material is cut as of COB today; however, there is still quite a bit of chipping to do, as well as final site tidying.

Comments:

Carl Gaube was not with the crew today. He was performing other duties at the diesel plant, and for the same reasons, the crew got an extra late start today.

The crew is using a different procedure for chipping today - each person hauls their material to the chipper and chips it themselves, so that if someone is at the chipper when they arrive, they stand there and wait, material in hand, until their "turn" at the chipper. At times there are 3-4 crew members waiting in line to get to the chipper. Previously one person ran the chipper while the other members hauled material and stacked it near the chipper.

Chipped the previously cut/stacked material in the FAA Storage Yard and some from the personnel garages area.

Also finalized loose ends at the tank farm, building 217, and the 7000 gal AST, so that each of the aforementioned sites are complete. Add the tank platforms along Army Beach to finish the list of completed sites.

Comments:

I met with Carl Gaube @ the MP&L shop this a.m. - I said he really needs to be the one who tells the crew what still needs to be done at the sites.

The crew will be thinning significantly starting as early as tomorrow. Ed Dunne and Ralph Carmona have vacations, and Carl will be filling in for someone else at the shop.

Lunch was prolonged (11:50-2:30) due to required maintenance on the chipper performed at the MP&L shop.

One crew member spent most of day working on falling trees (outside contracted area) for personal use. Not sure if he was on payroll today or not.

Carl Gaube and Floyd Russell came by the site in the afternoon. We discussed vacation schedules, work planned for tomorrow, etc.

Project:	Brush Clearing	Date:	110699
Site Name	LOC, ACS xmtr, rmt recvr, Glide Slope, NDB, Old Pwr F	Site Number:	80, 36, 23, 63, 19, 62, and 24
Weather:	OC, rainy, moderately windy	ОТМ:	LDJ
Start Time:	8:15-8:30am	Stop Time:	3:30pm
Work Com	Noted Today		

Went around to sites which require little cutting, and completed all contract requirements for the following: localizer (v), remote receiver station (z), glide slope (x), ACS transmitter (y). All cutting work is complete at the following sites, with chip removal still required: near the NDB (r), middle marker (w), and the area around the PAA garage tank (p). Work also began at the old power plant.

Comments:

The contractor is working on these sites at the bottom of the itemized list to improve their record of completion. Today's work brings the total sites 100% complete to eight sites (Sites A, B, C, D, V, X, Y, and Z). Three sites are 95% complete (Sites R, W, and P), four sites are 80% complete (Sites I, J, K, and L).

Carl Gaube (MP&L) and I discussed the time remaining in the originally-scheduled 9 weeks: The FAA was made aware that the 9-week schedule was exclusive of weather and other power responsibility delays. If we take out the weather days and days not worked due to power providing responsibilities, holidays, etc. and put those days at the end of the schedule, it adds 7 work days to the 9 week schedule.

Site Name FAA Service Garage, Old Power Plant	Site Number:	55, 62
Weather: Breezy and rainy, heavy at times.	OTM:	LDJ
Start Time: 8:15-8:30am	Stop Time:	3:50pm
Work Completed Today:		

Worked on the Service Station site (the one with the floor-mounted hydraulic hoist). No chipping today. All material cut from the service station is being stacked across road at FAA Storage Yard area for later chipping with the other material in the storage yard. This brings the Service Station site 100% complete.

After completing Service Station (Site T on this project), crew moved over to the Old Power Plant (Site F on this project) and continued clearing around the building which was begun on 11/6.

Hauled chipped material from FAA Storage Yard area to Bryant residence.

Comments:

The crew wants to work on getting the smaller sites dealt with so their completion record improves, hence the effort at the Service Station site.

All MIC offices (including MP&L) are closed 1/2 day for a funeral. However as these crewmembers are not permanent, full-time MP&L employees, they are not entitled to full-day pay and decided to work the full day. Note below David Schwehm, perm/FT, only worked 1/2 day.

Project:	Brush Clearing	Date:	111599
Site Name	e: FAA Storage yard	Site Number:	51
Weather:	Cloudy, rain, high wind advisory	OTM:	LDJ
Start Time	e: 8:30am	Stop Time:	3:30pm
Work Con	npleted Today:		

Work focused on hauling/stacking previously cut material in FAA Storage Yard. Crew members cut small area as well.

Comments:

Small crew today (two people only). Crew member Bob Clark injured himself over the weekend. MP&L foreman Carl Gaube requisitioned an additional employee through the TERO, scheduled to start tomorrow.

Spoke with Laura Wellington and Paul Brendible (MIC Contracts and Grants) today about the revised schedule they were to provide FAA. They said Jeff Benson was supposed to get the schedule from MP&L. Called Jeff Benson's office; he was out on an emergency callout.

Went over the area remaining to be cut in the FAA storage yard with MP&L foreman Carl Gaube. The area is well-marked with surveyor tape. The crew plans to concentrate on finishing the FAA storage yard and the gas station/personnel garages area while I'm gone. There is plenty of work left to keep them going at these two areas. If, in the unlikely event they finish these areas, the crew plans to begin work on Bldg 100.

Project:	Brush Clearing	Date:	120199
Site Name	FAA Stg yd, Personnel gar, Old pwr pint, NDB area, PA	Site Number:	Hangar, 51, 49, 62, 19
Weather:	High winds, rain heavy at times. Clear/calm in aftn.	ОТМ:	LDJ
Start Time	8:30am	Stop Time:	3:45pm

Chipped material that was already cut and stacked in FAA storage yard. Also hauling chipped material from bldg 203 to the Bryant residence, approx 800-900 ft away from the chip pile. Also hauled chipped mat'l from FAA storage yard. Carl Gaube and Frank Taylor went by the NDB, PAA garage, and the Old Power Plant sites, picked up and hauled off the chips.

Comments:

I met with Laura Wellington and Paul Brendible (MIC Contracts and Grants) this morning and afternoon re: their first invoice and completion status of each site. Also reiterated that the FAA's primary concern is quality of work; and that schedule, although important, is not primary.

I went around to all sites worked on so far and re-evaluated their percent completion in order to produce a new "snap shot" of work completed to date. I discussed with Laura and Paul that I would complete a "snap shot" report at the end of each day and give a copy the following morning to Russ Collins, MIC, and MP&L.

Today's "snap shot" of completion status finds the following sites 100% complete: Sites A, B, C, D, G, J, L, M, N, P, R, T, V, X, Y, and Z (16 sites). The Middle Marker facility and the FAA Gas Station (Sites W and I, respectively, as identified in this contract) are 95% complete, only requiring scant removal of already-cleared material. Sites F, H, and K are all estimated to be 90% complete: they each require a small amount of cutting/chipping/hauling at the site. Site Q, the FAA storage yard, is estimated to be approximately 55% complete. Heavy cutting, chipping, and hauling remain at this site. Work has not begun at the sand shed/asphalt plant, site S.

Cut/packed/stacked/chipped material in the FAA storage yard area.

Hauled off remaining material at sand shed/asphalt plant area, bringing this site to 100% completion.

Picked up all loose material at the gas station, bringing this site to 95% completion. Material is stacked by roadway for chipping and disposal.

Picked up all loose material at personnel garage 203. This site remains at 95% completion, only leaving removal of the material to achieve 100% completion.

Very heavy frost last night made roads extremely slippery (including gravel roads) and the trees slick with icy coating.

MIC has hired workers under their general assistance (GA) program called "Christmas Relief" which provides jobs for members during the Christmas season. The workers are paid (using outside funding) to do odd jobs around town. MP&L requisitioned four of these employees to work on this brush clearing project (at no cost to
